

ALMOST HEAVEN SAUNAS

BARREL SAUNA ROOF KIT INSTALLATION GUIDE

Almost Heaven Saunas provides an optional roof kit in various sizes and colors. The roof kit is rust resistant and is an ideal option for those wishing to completely eliminate moisture seepage through the top of the sauna. The kit comes with multiple sections of corrugated metal that can cover nearly 50% of the sauna. The user can install as many sections to cover as large a space as desired. Installation instructions are as follows:

The roof kit can be installed to cover any portion of the sauna the user desires, using all or a portion of the provided sections.

Using a portion of the sections

Using all of the sections

1. Center the first section left to right and front to back. There may be a slight overhang.

2. Drill self-tapping screws every 12" through the metal and into the wood.

3. Slip the next roof section under top section to the desired coverage. Screw through top section, through bottom section, and then into wood.

INSTALLATION TIPS

- 1) When drilling through the metal and into the wood, stay back from the end of the wood by at least 1" to avoid splitting the wood.
- 2) Drill into the wood and not the joint between the wood staves to minimize the chance of splitting the wood and for maximum attachment strength.
- 3) Insert next piece of roof section UNDER top piece before screwing edge of top piece in place.

Note: After the roof kit installation is complete, we suggest that you bend over the four corners with a pliers so that the sharp edge does not protrude.
